Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: the prior art of record fails to show a method of configuring the dynamic database packageset switching program having the details, as set forth in claims that include such elements as obtaining a database comprising processing parameter values used in processing financial transactions, wherein each processing parameter is associated with a predetermined financial transaction; displaying a plurality of key elements on the display screen wherein the key elements includes data from financial transactions selecting one or more of the displayed key elements creating a key definition wherein the key definition comprises one or more of the selected key elements associating one or more processing parameters with the key definitions the association process by entering a key value for each of the key elements of the key definition in a first field of a template displayed on a display screen of a monitor coupled to an FSO computer system, wherein the combination of key value identifies the predetermined financial transaction, and associating a database identifier with the key values entered in the first field by entering the database identifier in a second field of the template displayed on the display screen, wherein the database identifier entered in the second field of the template comprises a database location of one or more processing parameters used to process the financial transaction identified by the key value entered in the first field; and storing the entered key value and the database identifier in a first memory coupled to the FSO computer system.

Musmanno et al 5,940,809 shows a method of configuring a dynamic database packageset switching program to obtain a database having processing parameter values used in processing financial transactions, wherein each processing parameter is associated with a predetermined financial transaction; entering a key value (334) in a first field of a template (300) displayed on a display screen of a monitor coupled to an FSO computer system, wherein the key value identifies information needed to process a financial transaction; entering a database identifier (UID) in a second field of the template displayed on the display screen, wherein the database identifier entered in the second field of the template comprises a database location of processing parameters (324) used to process the financial transaction identified by the key value entered in the first field; and storing the entered key value and the database identifier in a first memory coupled to the FSO computer, but fails to show displaying a plurality of key elements on the display screen wherein the key elements includes data from financial transactions selecting one or more of the displayed key elements creating a key definition wherein the key definition comprises one or more of the selected key elements associating one or more processing parameters with the key definitions the association process. NPL document, "Technical Communication Online" (dated August 1998, Vol. 45, No. 3) fails to show displaying a plurality of key elements on the display screen wherein the key elements includes data from financial transactions selecting one or more of the displayed key elements creating a key definition wherein the key definition comprises one or more of the selected key elements associating one or more processing parameters with the key definitions the association process. Foreign

reference EP 0836779 B1 fails to show displaying a plurality of key elements on the display screen wherein the key elements includes data from financial transactions selecting one or more of the displayed key elements creating a key definition wherein the key definition comprises one or more of the selected key elements associating one or more processing parameters with the key definitions the association process.
